

Junior Research Lab for agricultural transitions

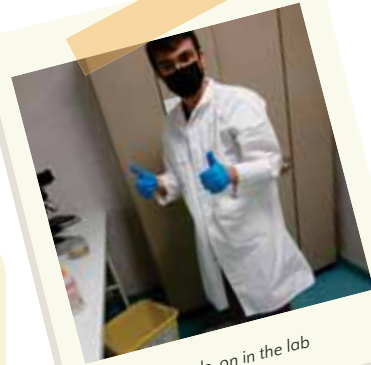

The **Junior Research Lab** at **L'Institut Agro Montpellier** reinforces your scientific background, trains you through collaborative research activities within a group of French and international students, to develop your critical thinking, your scientific rigor, creativity and taste for innovation and research.

You will choose among a variety of themes and co-design your own **project** with the support of senior researchers. By managing your project from end to end, you will develop multiple skills strengthening both your **self-learning skills** and your ability to collaborate with others. You will experience disciplinary content through research-based learning based on real life scenarios. It will be a different **experience** from a traditional internship, since you are empowered in your choices and your responsibility as well !

Communication skills

Brain storming in the HIVE

Hands-on in the lab

As an international student, you have the possibility to apply for a **living allowance** (600 euros per month) for 4 months while following this program. Contact the module leaders for more information!
